

ABSTRACTED-PUB-NO: JP09051520A

BASIC-ABSTRACT:

The appts has a receiver that receives the predetermined programme selectively from a broadcast station. A first extraction unit extracts several information from the received programme. A second extraction unit extracts the information indicating the scramble of the information. A first judgment unit judges whether the reception contract is made based on the information extracted by the first extraction unit.

A second judgment unit judges whether the scramble is given to the information extracted by the first extraction unit based on the information extracted from the second extraction unit. A descrambler performs descramble processing to the information judged to be given with the scramble, when reception contract is judged.

ADVANTAGE - Enables viewer to view and listen contract for every programme. Enables protection of several information.
